Using HTML.edit Help

Help on using this editor is available throughout. Turning on Balloon Help (for System 7 users) provides balloons on many features of the editor.* There is also Palette Help, a diagram showing the functions of the tool palette displayed by clicking on the question mark button found on the Tool palette. See also Tool Palette.

Back to Project Strategy, on to HTML Help, or return to Contents.

*Yes, I do realize that the balloons act funky if the card window isn't scrolled to the top (see Sizing Windows). This is a bug in the way HyperCard handles its Balloon Help.
