1.2 About MagicSelector

About MagicSelector Important Information

This software is provided as-is, without warranty either expressed or implied.

In no event will the author be liable for direct,indirect, incidental or consequential

damages or loss of data resulting from the use of this software. The risk as to results

and performance of this software is assumed entirely by the user.

MagicSelector is shareware, so if you find it useful, and use it regularly, I ask that

you register MagicSelector for $10.00 (U.S.). If you really cannot afford the $10.00 fee,

you may send me a registered version of a program you wrote that you feel is comparable to

MagicSelector.

This program cannot be used for commercial purposes without written permission from the author.

Special permission is hereby granted to include MagicSelector in Public-Domain collections

such as Fred Fish's Amiga Library, Aminet CD ROMS, etc.

What Is MagicSelector

MagicSelector is a program who select different background and sound in Workbench each time you

are booting up you Amiga.

I have written two programs that helps, me to select an background and a sound for each startup.

These two programs are:

MagicSelector Preferences

MagicSelector

I had to build an MagicSelector Preferences, so the user can specify the files he want to use in Workbench.

MagicSelector is the main program, that set up you background(s) and Sound.

MagicSelector software and documentation are © 1994 by Øyvind Falch, Triumph Software.

All rights reserved.

For Registration see Registration.

1.3   Requirements

MagicSelector should run on any Amiga system with at least 512K RAM.

MagicSelector requires:

KickStart v3.0 or greater

asl.library

datatype.library

8SVX datatype

MUImaster.library V2.2+

MUI-Classes

Sys:Prefs/WBPattern

sys:Prefs/Sound

I have not included MUI since this would have made the archive a lot bigger. If the MUI-package is not yet in your possession, you should be able to find it at several Public Domain sites around the world, your local BBS or on Public Domain Disks.

The Graphical User Interface (GUI) was created using the great MUImaster.library V2.2 MUI, Copyrighted 1992/94 Stefan Stuntz.

1.4   Author

I have installed MagicWorkbench (by Martin Huttenloher) and after a while i wanted to have a different background and sound in Workbench each time I am booting up my Amiga.

PS ! MagicSelector Preferences and Magicselector Main is written in assembler using Devpack 3.04.

For Registration see Registration.

Other programs made by me (Latest Version):

Program: Description:

DMS-Face V1.0 DMS Interface (MUI)

ADProRunner V1.7 Runs ADPro with memory spesification (MUI)

Icon Illusion V1.2 WB with 256 colors icons

Icon Illusion Converter V1.2 Icon Converter

PowerPlay V2.32 ModulePlayer (Out of Date, Dead!)

JumpScreen V2.0 ScreenJumper (Out of Date, Dead!)

1.5   MagicSelector Preferences

The MagicSelector Preferences is splittet into Pattern and Sound. I will only explain Pattern

since sound setting is the same.

The MagicSelector have two differente methods to select an background:

Select Mode: Sequence ;Next Background in the list.

Random ;Random Background from the list.

Remapping: I am using WBPattern to change the Background. You can then select if the WBPattern

program shall remap you background to the allready selected palette or not.

ListView: WorkBench

Windows

Screen

Add: Add an background to the list.

Remove: Remove an background from the list.

If you want to remove an entry, select entry and press remove.

Save: Save Changes

Cancel: Discard Changes

DoubleClick on an Entry for preview, You must have Multiview at this path:

SYS:Utilities/MultiView

PS!, MagicSelector preferences do NOT check the files you are inserting in the list, so you

should not try to select other files than you have datatypes for (OS3.0) or IFF files.

1.6   MagicSelector

This program must be in WBStartup or in you Startup-sequence(User-start). There is no arguments

or anything other thing you can do with it.

It is picking backgrounds and a sound from the list you have generated with the preferences

program. If the list is empty or the listfile is missing it does nothing.

1.7   History

MagicSelector History

Version 1.0 (26.7.94)

First release

Version 1.01 (27.7.94)

Fix Bug in WBStartup Program

Version 1.10 (8.8.94)

Added Sound Support

Own listviews for Workbench, Windows and Screen.

Removed Checkmark buttons, No function anymore.

Safer error handling in both program.

Removed all 4 enforcer hit in the prefs program.

Version 1.20 (30.8.94)

Added locale support

Listviews are not longer in alphabetic order.

Added Movement button on all listviews.

Added preview doubleclick on entry for background and sound.

Software changed to ShareWare

1.8 ToDo

ToDo List

More languages in locale support.

Background preview in thumbnail format.

Sound prehear directly.

Keyfile protection.

Include some backgrounds and sounds.

Add documentation in mosaic format

1.9 Registration

MagicSelector is SHAREWARE. If you like this program and would like

to get rid of those irritating requesters, you should send

me one of following.

OTHER COUNTRIES: (EUROPE, USA.......)

Payment options are:

1. 10 US Dollars.

2. Other currency. (Worth of 15 US Dollars)

3. 70 NOK.

DON'T send checks!! Sending the money using checks is expensive for you and

it is expensive for me, only banks benefit from it.

Cash is the most easiest way to pay the fee, it has its own risks

but if you wrap little paper around money then no one will see'em and steal

them. If you know any other easy way to send money, use it. Just make sure

it doesn't cost me something like half the fee to get it cashed.

If you are sending some other currency than US dollars or Norwegian kroner,

then the sum does not have to be EXACTLY equal to 15 US dollars, I'd

appreciate if the sum would be atleast 10-15 dollars. Whatever sum in that

range is the easiest to exchage to your local currency's notes.

Send your letter to following address.

Øyvind Falch,

Triumph Software

PostBox 240

3192 Horten

Norway

You should include something like following with the payment.

** CUT HERE ********** CUT HERE *********** CUT HERE ************************

Yeah, I would like to register MagicSelector and by paying

above mentioned amount of money I will ensure myself a quick

keyfile delivery on normal DD amiga FFS formatted disk.

I HAVE INCLUDED FOLLOWING AMOUNT:_____

NAME:_____

ADDRESS:_____

ZIP CODE:_____

COUNTRY:_____

AMIGA TYPE I AM USING:_____

HARDWARE WITH AMIGA:_____

BUGS THAT I HAVE FOUND FROM MY VERSION _____ MagicSelector

_____

_____

IDEAS FOR FUTURE VERSIONS:

_____

_____

*** CUT HERE **** CUT HERE **** CUT HERE **** CUT HERE *******

Allow 1 to 3 weeks for delivery via snail mail. For European

users the normal time is under 2 weeks.

1.10 About MagicUserInterface

This application uses

MUI - MagicUserInterface

(c) Copyright 1993/94 by Stefan Stuntz

MUI is a system to generate and maintain graphical user interfaces. With

the aid of a preferences program, the user of an application has the

ability to customize the outfit according to his personal taste.

MUI is distributed as shareware. To obtain a complete package containing

lots of examples and more information about registration please look for

a file called "muiXXusr.lha" (XX means the latest version number) on

your local bulletin boards or on public domain disks.

If you want to register directly, feel free to send

DM 30.- or US$ 20.-

to

Stefan Stuntz

Eduard-Spranger-Straße 7

80935 München

GERMANY
