Chapter 1

GhostscriptGUI_english

1.1 GhostscriptGUI - Description

```
G H O S T S C R I P T G U I
=====
```

Introduction	Why a GUI for Ghostscript?
Systemrequirements	What needs GhostscriptGUI V 1.10 to work?
Installation	How to install GhostscriptGUI V1.10 ?
Ghostscript	What is that ? Where do i find it ?
Usage	How to use GhostscriptGUI V 1.10
to do ...	What is to do yet?
The Author	Who has GhostscriptGUI V1.01 written?
Copyright	Copyright
Sorry for my bad english ...	

1.2 Intoduction

Why did i wrote this Programm?

First i would only play with the new Reactiongui and how to write programmes for it, and now this was the beginning ...

I used Ghostscript from the Shell, and the usage is laborius. Commandolines over two lines long (who has used Ghostscript will it know).

1.3 Systemrequirements

What needs GhostscriptGUI V1.10?

Hardware:

=====

- a Amiga :-)
- all requirements that needs Ghostscript

Software:

=====

- OS 3.5 or MUI 3.8 and OS 3.0
- a complete Ghostscript-Installation with a Assign Ghostscript:
- to print Turboprint V7
- a PNG-Datatype to view a document

1.4 Installation of GhostscriptGUI V1.10

Copy the whole drawer wherever you want!!!

1.5 Ghostscript? What is that?

What is Ghostscript?

Ghostscript is a Shellcommand to view PDF or PostScript Files, or to print.

Where to find Ghostscript?

- if you own Turboprint V7 , on disk 2
- Aminet: gfx/show

1.6 The Usage of GhostscriptGUI V1.00

PDF/PS-File: choose here the File to view or print

Page View

Resolution: Choose here the resolution to view the file = size of the document.

Recommandation: 75 x75 - 150 x 150

Colors: Choose here the number of colors of the Viewimage.
For the most PDF/PS-Documents Black and White is enough.

Slider Page: Choose the Page to view.

Button Prev: Click here to view the previous page.

Button Next: Click here to view the next page.

Button View: Click here to view the selected page.

Page Print

Resolution: Choose here the resolution to print.

Colors: Choose here the number of colors to print.

Recommandation: The most PDF-Documents needs only Black and White
example: Datasheets of IC's

Device: With Turboprint should all be right!!!

Currently the Device "Workbench" does not print correctly.

Option: (-sDEVICE=amiga_printer)

On the printed pages are only the images not the text.

Print:	all Pages:	prints all pages	1,2,3,4, ...
	only odd Pages:	prints only odd pages	1,3,5,7, ...
	only even pages:	prints only even pages	2,4,6,8, ...

Recommandation: First use "only odd Pages",
then turn the stack, that on the back side
off the first page page 2 will be printed
and select now "only even Pages".

Startpage: Choose here the first page to print.

Stoppage: Choose here the last page to print.
If startpage>stoppage then nothing will be printed.

Print: Starts the printprocess.

The Tooltypes:

VIEWER/K: Here you have to choose your viewer.
e.g.: Multiview, Cyberwindow, ...
If you choose no Viewer the page will not be displayed.

PATH/K: Here you can enter the path to your PDF/PS-Files.
e.g.: Data:PDF/

GUI/K: Here you choose your GUI: - Reaction
 - MUI
If you don't use this option, the programm will choose the GUI
which to use!!!

The usage from the cli has the same options.

e.g.: GhostscriptGUI GUI=Reaction VIEWER=Cyberwindow PATH=Daten:PDF/

1.7 to do yet ...

- a Page "convert" to convert e.g. PS->PDF
 PDF->PS
 PDF/PS->PNG/PCX
- an option FILE/K to use GhostscriptGUI with DefIcon
- remove bugs

Known bugs:

- Workbenchdevice prints not correctly

if you will see more bugs, please mail
