COPYRIGHT  
~~~~~

This program is shareware, and I still have the copyright on it.

The author of this program is in no way liable for its malfunctionning or damage caused by it. Use it at your own risk.

The donation fee is \$5.00 that you are asked to send to my address (at the end of this file) if you find this program useful and use it.

You cannot use Ora in your own programs without my written permission.

### 1.3 description

DESCRIPTION  
~~~~~

---

Ora is a simple program that tells you the system time, saves it in the S directory of your boot disk (or hard disk) in a file called 'data'; so don't be surprised to find this file.

The program works on any Amiga with clock and ROM 1.2 or above.

To best use the program, insert it in your startup process (see installation).

Your boot disk must also be unprotected to let the program write onto it.

The program also tells you the last time you used the disk containing it. Starting with version 1.6, Ora lets you know how much time ago was the last boot (see syntax).

The program works in three different languages: Italian, French and English (see syntax).

## 1.4 syntax

SYNTAX  
~~~~~

The correct syntax for Ora is:

Ora <Language (I|F|E)> <Text>

Remember: you must indicate the language (I=Italian, F=French, E=English) and a text, if you forget one of these, the program will display a screen reminding you of the correct syntax.

If the text contains spaces you must "quote" it.

The 'T' option indicates that you want to know how much time passed since the last boot.

Note that the option can be in either upper case or lower case.

## 1.5 installation

INSTALLATION  
~~~~~

To install Ora you must copy it into the 'c:' directory of the boot disk. Then edit your Startup-Sequence (or User-Startup for 2.x/3.x users) and add a line to run Ora following the syntax.

Here is an example that will display the time in English, print the message "This is my Workbench" and tell you how much time passed since the last boot:

Ora E "This is my Workbench" t

---

## 1.6 bugs

BUGS

~~~~~

Old:

The version 1.04 and preceeding have a problem with the first day of the year. It has been fixed in version 1.5 and following by re-writing the program.

New:

None.

## 1.7 history

HISTORY

~~~~~

- V1.6 - 09/02/93 - Added the 'T' option that tells how much time passed since the last boot.  
The doc(s) are in AmigaGuide format.
- V1.5 - 06/27/93 - Program re-written to take full advantage the functions of the programming language. This fixed the bug for the first day of the year (see bugs).  
I also started to use the new system to number the versions introduced by Commodore. This version comes after the 1.04.
- V1.04 - 12/18/92 - Corrected the syntax for the first day of the month and for English. There is no need to create a 's:data' file as the program does it by itself.
- V1.03 - 10/17/92 - I cleaned up the program and made it "multilingual". This is the first public version of Ora.
- V1.02 - 10/13/92 - I finally managed to read/write to a disk without crushing the computer.
- V1.01 - 10/01/92 - Program size reduced from 8.3K to 8.1K.
- V1.00 - 09/30/92 - It works and prints the time on screen.

## 1.8 address

ADDRESS

~~~~~

If you have any questions about the program, or find bugs, or want to pay the shareware, write to me in English, Italian or French at the following address:

DOSIO Claudio  
3 Craig Lane  
Haverford, PA 19041  
USA

## 1.9 acknowledgments

ACKNOWLEDGMENTS

~~~~~

I want to thank Joe DiValerio for asking me to add the 'T' option to know how much time passed since the last boot.
