## Chapter 1

# SetPatch\_43.4

### 1.1 main

workbench/c/setpatch

Patch for mathieeesingbas.library Mul/Div FPU handling.  
Patch for the OS copyright.  
Patch for WritePixelLine8 trashing the source.

Make a copy of your old SetPatch before testing the V43 SetPatch.  
The V43 SetPatch should work well with any OS >= V37. Please send  
in a short report if it WORKS WELL, too!

The CheckSetPatch.c code fragment may help some software developers  
to internally turn off workarounds for OS bugs conditionally.
