Welcome to NEXTSTEP and to the world of object-oriented computing.

NEXTSTEP has been committed to object-oriented technology for over seven years. Now in its third generation, NEXTSTEP is the most popular object-oriented operating system in the world. Like tens of thousands of other users, you will discover that NEXTSTEP allows you to seamlessly integrate state of the art shrink-wrap productivity software with custom business applications to fuel your corporate success. And while you're exploring the power of your new NEXTSTEP environment, you can still be running DOS and Windows applications at the same time, and also be connected to your NetWare LAN or AppleTalk network. NEXTSTEP simply brings it all together today.

If you are a developer, you will be able to develop your advanced, object-oriented client/server business applications with unprecedented speed and quality under NEXTSTEP.

At NeXT, we're committed to continuously improving our products and quality based on our users' feedback, so please e-mail or fax any suggestions you may have to our product improvement team (e-mail: product_suggestions@next.com or fax 415 780-3950). Together, we can make NEXTSTEP even better.

We hope that you will love NEXTSTEP as much as we all do.
