

Data Sets:

paste_11.tiff ↵

The data sets included in the plot are listed in the scroll view at the top of the panel. To change the attributes of one of the data sets, select it in the scroll view. Its attributes will appear in the panel.

The user can select the type, color, size and fill of the markers for the selected data set in the *Markers* box. Click the border of the color well to call the *Color Panel*.

The *Connect Style* box allows the user to select the width and type of line (no line, straight line and spline.)

The *Is Displayed* button allows the user to exclude a particular data set from the plot.

The *Sorted* button ensures that the data is sorted in order of increasing

independent (x) axis data.

The *Excluded From Legend* button removes the selected data set from the legend (if one is displayed.)
