

Working with the Document:

Resizing Columns:

You may change the width of the Column by clicking to the right of the Column and dragging the mouse. You will see the cursor shown below when you move the mouse between Columns in a Document to indicate that you may resize the Column to the left at by dragging where the mouse is at.

paste_0.eps ↖

Moving Columns:

To move a Column simply grab it by its Grab Bar and drag it to the position where you want it to be placed. The Columns will automatically realign to the proper positions.

Renaming Columns:

To rename a Column double click on its Title field and enter a new title. If the title is not valid because it is already used as the name of a Column, Variable, function, or constant the Column title will change back.

Giving a Column an expression:

Simply click in the Expression field enter a valid expression. If the expression causes a circular reference it won't be accepted. If it is invalid the expression will revert to what it was previously.

Selection :

See Copying and Pasting under the documentation titled Edit.
