

*Edit:*

*paste\_0.tiff* ↵

The Edit submenu has a lot of standard NeXT items, but there are several features which may be of interest to you. Please read the *Copying and Pasting* documentation for further explanation of the features of the menu items *Copy*, *Cut*, *Paste*, and *Delete*.

The *Insert Row* item will put a new row just before the last into the Active Column of the Active Document .

The *New Column* item will put a new Column into the Active

Document .

The *Find*, *Spelling*, and *Check Spelling* items work as would be expected. You may wonder where you will find text in *DataExplorer*. It is possible to add a *Comment* to a *Plot* which contains text that you may want to spell check or find information in.
