

Performance Tuning Self-Teaching Guide

by Mai Nguyen, NeXT Developer Support
and Randy Nelson, NeXT Developer Training

This folder contains 3 versions of the same example VisibleView. VisibleView-01 is the non-optimized version, VisibleView-02 is a version with some improvements, and VisibleView-03 is the most optimized version. The Winfo folder contains the Winfo tool.

With the supplied ToolsNotes, you can go through the performance tuning exercises, and familiarize yourself with different development tools, such as **gprof**, **ProcessMonitor**, **MallocDebug**, **Winfo**, etc.

The notes also contain a valuable Performance Tuning CheckList that you can re-use to optimize any of your applications.
