

# Project Development

The ugliest code I have written so far. It shows the even the nice Objective-C++ language can be used to write *procedural apps* with no grace<sup>1/4</sup>by using objects. The project was started because someone on the net complained about the lack of such a stupid application. For a quick summary of the features available in this release (v 0.21), *click here* ;ReleaseNotes.rtf; ;
