

MovieShow

free software

by Scott Bender and Harmony Data Systems

MovieShow is a simple animation viewer for NeXTStep. It plays Autodesk Animator™ FLI and FLC files.

I wrote it for a few reasons: First of all, the learning experience. I incorporated many features I had never used before. Like the help system and the fast bitmap drawing. My resume: It can't hurt to have another project to talk about when looking for the next contract. Fun: I had a blast writing this baby.

MovieShow is in no way, shape or form, perfect. I've tested it is on only about twenty different animations, so I'm sure there are files out there that will make it crash. If you find one, please send me e-mail explaining the problem. Please include the name of the file and where you got it from (anonymous ftp site, bbs, etc.) Please don't send me the file yet, I'll let you know if I need it.

The Future of Animnator

527003_PixelRule.tiff ↵

I currently have no definite plans for the future of **MovieShow**. I would like to add more formats like MPEG and AVI, but of course, time is mony, and I've wasted enough of both on this project already. If you have any ideas, suggestions, or would like to make contributions or additions to **MovieShow**, please let me know.

Disclaimer

In no event shall I, **Scott Bender**, be held liable for any damages, including any incidental or consequential damages arising out of the use of this software.

Cost

22870_PixelRule.tiff ↵

This software is provided **free** of charge for your private viewing pleasure. If you would like to use this software in a commercial setting, or would like to include the binaries or source code in a commercial product, please contact me at the address below.

Distribution

209312_PixelRule.tiff ↵

Please distribute this software wherever or to whomever you like, but please be sure to include **all** materials in their original packaging.

Credits

797721_PixelRule.tiff ↵

Special thanks to **Jeff Marshall** for the introduction to NeXT, the source code for translating palettized data to 16 bit RGB data (plus other goodies), and the many question and answer sessions.
