

# Working with Trees

A Wood document holds one tree. A tree is automatically drawn as you create it and change it.

`paste.eps` ↗

`684996_PixelRule.tiff` ↗

Wood is not a classical drawing program. You have to remember a few points when you work with it:

`146690_CheckMark.tiff` ↗ The edges between nodes are drawn automatically. You don't have to create them.

`172630_CheckMark.tiff` ↗ You cannot move nodes and edges around. The position of the tree is calculated by Wood.

`108383_paste.tiff` ↗
