

# Change Node Style

358755\_PixelRule.tiff ↗

With the Style Inspector (Command ⌘ 8) you can set a node's outline, outline line width, color and the edge endings to the node.

StyleInspector.tiff ↗

Fill refers to the background of a node. The background of the selected node becomes whatever color is in the Fill color well.

To add color to a node's fill, create the precise shade you're looking for on the Colors panel, then drag a color tile from the color well on the Colors panel and drop in the Fill color well. Adding color to the Text color well and Outline color well works exactly the same way.

The Style Inspector also controls the endings of the edges connected to the selected node. For the edge connecting the selected node to his

parent the edge is coming from the left and the selected node poses as a child. Therefore use the left matrix **as Child** to control the ending. For the edges connecting the selected node to his children use the right matrix **as Parent**.
