Wood Future (summer 1996)

This directory contains some early parts of the MiscTreeDiagramKit. The app is only a small test app, not very useful right now. You must have NS Dev 3.3 or EOF 1.1 to compile it.   You can already open and save trees in files with the extension **"owood"** and you can open ascii **"tree"** files like the ones found in the ../Sources/Samples/FilterData/MiscTree directory.

Release 0.8 of Wood

- will be Openstep compliant.
- will support horizontal and vertical trees.
- will be based on the MiscTreeDiagramKit.
- will have better woodfilters.
- will have better tree nodes with multiline text, images etc.
- will have ascii file format.
- will have labels on lines.
