Add Nodes

358755_PixelRule.tiff ¬

Two ways to add nodes

1   Click the   Add Node (Command +) button in the Edit menu. A single node will be added with the currently selected node as a parent node. The selection changes to the added node.

2   Choose a button in the Add Subtree submenu of the Edit menu. Every button in the Add Subtree submenu corresponds to a filter that will load a whole subtree and will append it as a subtree of the currently selected node. The selection changes to the root node of the added subtree.
