# Wish list of things to do in future versions

266379_PixelRule.tiff ¬

TaskArrowSm.tiff ¬  Write **considerably** more help information.

954721_TaskArrowSm.tiff ¬   Make it so files with the suffix of ª.pcdº are automatically opened by pCD.app if the user double±clicks on them.   Note that a photo CD includes several files with the suffix ª.pcdº which this program does not currently understand how to process.

594464_TaskArrowSm.tiff ¬   Handle color depth better.   It's silly for pCD to be sending 40 megabyte postscript files to a color printer which can't even handle 12-bit color, never mind the 24-bit images being sent.

796946_TaskArrowSm.tiff ¬   Fix cut & paste processing.   Right now a selection which is cut & pasted is not the same as the original (at the moment it gets changed into 72dpi, at the same screen size, which means you lost a whole bunch of information if the original was really 360dpi).

220924_TaskArrowSm.tiff ¬   Do a better job with printing options (I imagine they aren't supposed to be in the preferences panel...).   Add some more "Save As" options.

70141_TaskArrowSm.tiff ¬ Perhaps switch to the official Kodak code for deciphering photo CD images, assuming that becomes readily

available on the NeXT.

270233_TaskArrowSm.tiff ¬   See if I could implement some kind of database for images on a photo CD, so the user could attach textual (or other) information to specific pictures.   This would be a database on the user's hard disk for images which would be on the CD±ROM medium of a photo CD.

1700_TaskArrowSm.tiff ¬   Implement many of the interesting suggestions sent to me by various users of pCD.

**Note that I make absolutely no guarantees that I'll ever have the time to do any of the above!**
