

This is a list of all the defined '**typedef**'s for indent. From the **man** page:

## **-Typename**

Adds typename to the list of type keywords. Names accumulate:  
-T can be specified more than once. You need to specify all the  
typenamees that appear in your program that are defined by typedefs -  
nothing will be harmed if you miss a few, but the program won't be  
formatted as nicely as it should. This sounds like a painful thing to have  
to do, but it's really a symptom of a problem in C: typedef causes a  
syntactic change in the language and indent can't find all typedefs.

```
;buttons.rtf;Buttons;¬          Pushing the 3 buttons!!!  
;boolean.options.rtf;Setting boolean options;¬          Setting boolean  
options  
;parameter.options.rtf;Setting parameter options;¬          Setting  
parameter options
```
