

Services menu

478027_PixelRule.tiff ↗

191995_paste.tiff ↗

Lists commands that request the services of other applications.

A service provides a shortcut to starting up an application and requesting a specific action from it. For example, you can select a word in a document and choose Define in Webster from the Services menu. Digital Webster starts up and shows the definition of that word.

The commands in the Services menu depend on which applications you have. See the *User's Guide* for details.
