

The Fonts... Panel

Click on Fonts... in the inspector window to access the font panel. Note that MailWatch can use any NeXTstep fonts available on your system.

FontPopUp;↪Selecting which font to Modify

Choose whether you want to modify the "**MailFont**" or the "**NoMailFont**" from the popup list at the bottom of the font panel.

SetFont;↪Setting the font

The font panel displays the current settings for the font selected by the font popup. Make new selections in the **Family**, **TypeFace**, and **Size** columns. Click on the **Set** button to commit changes.

Note that the dynamics of the simulation are sensitive to the choice of font. This is because the mass of each name is proportional to the screen area it occupies, which is a function of font and size.
