

Using edsndP

edsndP is a nice sound editor which is available via anonymous ftp in pub/music at Princeton.edu. If you put edsndP in your Apps directory, or somewhere in your Workspace ApplicationPaths list (say dread Workspace ApplicationPaths to see what you currently have, and use dwrite to change it), then doing a shift/click on the number of a soundfile in the soundfiles window will open that soundfile up in edsndP. Currently it will open it again, everytime you shift/click. I'll fix this sooner or later.
