

Basic Use

257522_PixelRule.tiff ↗

Basically, GISO allows you to describe your current input sound, describe a desired output sound, and perform that conversion. NEXTSTEP compatible output sounds may also be previewd.

A normal session might go as follows, open a sound using the *Sound>Open..* menu item. Describe the sounds properties in the *input sound* area. In the *output sound* area describe what you what the sound to become. Hit *Convert*. The dialog area lets you see what sox has to say about what you asked it to do. It is possible to describe from GISO things that sox won't do, but sox will complain and indicate what corse of action to take.

Sound Play

943613_PixelRule.tiff ↗

The Play and Stop buttons let you review the sound you have created if it is a NEXTSTEP compatible sound type.
