

## Keyboard Layout

**New Keyboard...** in the **Tuning** menu is used to create a new Keyboard. This item displays a Panel for describing the initial tuning and size of the Keyboard. Indicate the *first Key*, the *last Key* or *interval*, and the *number of Keys* for the Keyboard. Either the first Key or the last Key may be described relative (cents, ratio, or interval) to the other. If tuning is described by *first Key* and *last Key*, the distance between these keys will be divided among *number of Keys* equally spaced Keys. If tuning is described by *first Key* and an interval size, Keys will

be tuned equally spaced by that interval, starting at *first Key*.
