

Special/Automatic Conversions

257522_PixelRule.tiff ↗

Sox can automatically configure parameters in certain cases.

Input

254697_PixelRule.tiff ↗

Use Header Info

If your sound file type is self describing (au,voc,snd,aiff etc.) and the file is named with the type as an extension then the Input Sound can be fully described automatically using the *Use Header Info* Saved Configuration.

File Type Auto

Sox can look and the data in certain sound file types and determine the parameters. Use type *auto* from the *Type* pull down in the Input Sound area.

Output

187486_PixelRule.tiff ~

Use Defaults

If you use the *Use Defaults* item in the Saved Configuration pull down in the Output Sound area, sox will do a best match from the Input Sound to the Output Sound *Type*. Often the *Rate* will not be optimal in this scenario but it will produce a sound.
