University of Waterloo Diagram Palette Collection

This is a collection of useful and/or just plain fun palettes for Diagram!.   These palettes contain hand-coded postscript images, so they   look as good printed out as they do on-screen.   The source postscript files are also included, so that they can be used elsewhere and so that they can inspire further palettes.

Backgrounds - Cool things to throw behind any diagram!
BkgndsRandom - never the same twice!
ColorGradations - overcome one of the limitations of Diagram!
Components - electrical symbols
Gears - a few "teethed-things"
Gradations - (gray scale) overcome one of the limitations of Diagram!
LogicGates - Logic symbols
Math - a rather kludgy way to do equation editing (mostly various symbols from the Symbol font)
PCBLayout - cheap and dirty printed circuit board layout
PCBLayoutPadSizes.diagram - (not a palette) dimensions of objects contained in PCB layout palette (for those who would want to know)
PSTidBits - little bits and tids
Stars - "It's full of stars!"
Tiles - non-ceramic (interesting as borders)
Triangles - stroked and unstroked
3-DShapes - Add a new dimension to your diagrams...
UW_Palettes_eps/   - source postscript files of all the objects
