

`- (void) dealloc` Deallocates the memory occupied by the receiver.

`-(NSString *) methodSignatureForSelector:(SEL) aSelector`  
Implemented by subclasses to return an object that contains a description of the `aSelector` method, or `nil` if the `aSelector` method can't be found. The `NSProxy` implementation of this method raises an `NSInvalidArgumentException` exception.

`-(NSString *) description` Prints the name of receiver's class and the hexadecimal value of the its id.

`-(void) forwardInvocation:(NSInvocation *) invocation`  
Implemented by subclasses to forward messages to other objects. The `NSProxy` implementation of this method raises an `NSInvalidArgumentException` exception.
