

initWithPath:(NSString\*)path  
transactionsEnabled:(BOOL)enable  
create:(BOOL)create  
readOnly:(BOOL)readOnly

Initializes a newly allocated NSByteStoreFile with path as its storage file. If enable is YES, transactions are enabled. If create is YES, the file path is created. If readOnly is YES, path is opened for reading. If readOnly is NO, path is opened for reading and writing.

(NSString \*)storePath

Returns the path of the storage file.

(void)compactUntilDate:(NSDate \*)limitDate

Removes free space by relocating blocks toward the origin of the virtual address space defined by the NSByteStoreFile. limitDate sets a time limit on this operation. No limitDate allows the compaction to run to completion.
