id)setAccessoryView:(NSView *)aView   Adds an NSView to the panel.

SView *)accessoryView   Returns the accessory NSView.

)runModal   Displays the Print panel and begins its event loop. If it is necessary to resize the panel in order to accommodate the list of printers, this method posts the notification NSWindowDidResizeNotification with the receiving object to the default notification center.

id)pickedButton:(id)sender   Stops the event loop.

id)pickedAllPages:(id)sender   Updates the panel when the user chooses all pages.

id)pickedLayoutList:(id)sender   Updates the panel when the user chooses a new layout.

id)updateFromPrintInfo   Reads NSPrintPanel's values from the NSPrintInfo object.

id)finalWritePrintInfo   Writes NSPrintPanel's values to the NSPrintInfo object.
