

# Jollys Class2.0 Fax ( version:1.00 compiled:21.Mar 1995 )

muenchen.de

written by jolly@cis.uni-

*Jollys Class2.0 Fax Modem Driver* supports sendFax capabilities for Class2.0 - modems on NeXTSTEP compatible computers. This Release is somewhat **stable on Motorola, Intel and HP**.

After you've installed the package with *Installer.app* ( as root ), launch the *PrintManager.app* and install JollysClass2.0\_Fax\_Modem on the port your modem is conneced to.

Before removing/compressing the package: remove the faxmodem with the *PrintManager.app* first, to prevent your netinfo database from getting corrupted.

**This software is Shareware - it's NOT FOR FREE !**

Feel free to copy and distribute it, but if you use it send me the following shareware-fee :

	US\$ 20	/	30 DM	for a single machine
	US\$ 10	/	10 DM	for every supplementary
machine.				

I'll not support this program. Furthermore this program is distributed without any warranty, expressed or implied. But I'd appreciate any feedback like bugreports, suggestions,...
