Subject: Improved ztiff script

Reply-To: Michael_Pizolato@afs.com

To try to make up for all the traffic I've generated lately, here's an improved version of the script I posted yesterday. I hacked this out in a few minutes:

```
ztiff -  
      ztiff
```

It adds the following flags:

- i list the compression scheme for each file specified
- l compress each file with LZW
- j compress with JPEG

- p compress with Packbits
- n uncompress (compress with None)

You have to specify exactly one flag, then the file(s) you want to work on, like this:

```
ztiff -i Foo*.tiff Bar.tiff
```

Thanx,
Michael
