

RandomTableView

(simplified from the original TubeTester example by Brian Pinkerton)

This example implements an arbitrary data source (ie database independent) following the DBTableDataSources protocol.

See the documentation for more details on DBTableDataSources.

Valid for 3.0, 3.1, and 3.2

Change History

11/April/93

Modified **RandomDataSource.[hm]** to use StringList.
Modified StringList API to add a method initWithCount:
Modified **getRandomString()** to use NXStream.

Credit

to Jeff Martin for his StringList.[hm] code.
