To compile you'll already have had to compile a few other things:

MiscClockView palette

MiscDragViews.palette

MiscKit

Put the libraries that are created when the palettes are built in `/usr/local/lib` so they will be found during linking. Also put the new MiscKit library in `/usr/local/lib` if you haven't already.

You should now be able to build this test app.

If you want to look at the inspector nib you will also have to have both the above palettes already loaded into interface builder before trying to load the Inspector.nib.
