Customizing Quick Projects

266379_PixelRule.tiff ↵

You can add your own Quick Project Templates to the list shown.
You might do this

- 1) Select **BasicProject**
- 2) Save it as **~/Library/QuickProjectTemplates/MyProject**
- 3) Set up that project the way you like - edit the Makefile.preamble, add other objects or libraries, etc etc.

From this point on, you can select **MyProject** in the browser, and create clones of your own customized project.
