## Known problems

(UNIX-Haters Tool v0.11)

438886\_paste.tiff ↗

TaskArrowSm.tiff ↗ No real bugs are known so far...by default call it a UNIX feature and think of it as buggy-research-operating-tool.  
481918\_TaskArrowSm.tiff ↗ If you find one please let me know. No matter if it is only a mis-spelled word in the help pages or other documents.

Thank you.

291955\_PixelRule.tiff ↗

220329\_CheckMark.tiff ↗ Certain parts definitely need to be customized using the InterfaceBuilder to meet your local site's needs. Especially the UUCP and the PPP sections.  
If you don't know how to do that...take a look at the MiscKit and the MiscShell documentation.

391386\_CheckMark.tiff ↪ To be able to run the "Export News" feature manually you either have to *be* root, *setuid* the application to root, change the permissions of the "newsrun" and "sendbatches" shell scripts or...well just leave it alone.

457413\_CheckMark.tiff ↪ Resizing the splitview in the "UUCP Batch" section might size the buttons out of the view. To get them back you have to restart the application.

735576\_CheckMark.tiff ↪ If you want to see every process running on your machine you must grep for a period sign ("."). Blanks don't work here !

53781\_PixelRule.tiff ↪
