This was donated by Mark Onyschuk <mark@oa.guild.org>   for use by MiscKit users.   It creates (automatically) the - setXXX: and -xxx methods for accessing an object's instance variables.   I hope (someday) to turn this into a more full fledged, GUI CASE-type of tool. Until I do that, though, I leave this perl script here for anyone and everyone to play with and enjoy.   It certainly can be useful...

Later,

-Don Yacktman
