MiscGaugeViewPalette Release 0.1 (version 0.4)

This palette was the result of extending the GaugeView that comes with the BusyBox example (/NextDeveloper/Examples/AppKit/BusyBox). If you extend it, find it useful, or find a bug please let me know.

Known Problems

You cannot set the tick interval to be less than 1. Therefore right now you cannot have a gauge that has a range from 0-1.0 with an interval of 0.1. This will probably be fixed in some future release.
