Project Templates

266379_PixelRule.tiff ¬

Project Templates are complete, ready-to-compile Project Builder projects, complete with source code, nib files and so on.   Quick Project includes a few ready-to-use templates.

You can also add your own templates in **/LocalLibrary/QuickProjectTemplates** or **~/Library/QuickProjectTemplates.**   Simply set up a complete Project Builder project, add whatever nibs, source code and so on you like, and save it in one of those directories, and it will show up in the Templates list.   For instance, you might create a project in **~/Library/QuickProjectTemplates/MyDBKitTemplate**, and **MyDBKitTemplate** would show up in the browser.
