delegate

1.

When flag is YES, the method simply counts the words from startingPoint to the end of the text stream and returns YES if any of them have misspelled words. Otherwise, it returns NO.

When the method finds a misspelled word, it should then invoke the NXSpellServer's method isInLanguage:caseSensitive: to discover whether the word is acceptable to the user or to the document. It should return YES only if it has found a word that is not acceptable to either of them.

Returns YES if a misspelled word has been found, and sets start and length to identify the misspelled word. Returns NO if the search reaches the end of the text stream without encountering a misspelled word, or whenever flag is YES.
