Manipulating font font

setFont:

Batching format requests beginBatching:

resetBatching:
endBatching

Archiving write:

read:

beginBatching:(id <DBTableVectors>)attrs

Notifies the DBTextFormatter that a formatting session is about to begin. You never invoke this method directly it's invoked by the DBTableView that's using this object as a formatter. The end of a formatting session is signalled by endBatching.

endBatching, resetBatching:

endBatching

Notifies the DBTextFormatter that a formatting session is over. You never invoke this method directly it's invoked by the DBTableView that's using this object as a formatter. The beginning of a formatting session is signalled by beginBatching:.

beginBatching:, resetBatching:

font

Returns the DBTextFormatter's Font object.

12 point and batching is turned off. Returns self.

    read:(NXTypedStream *)stream

Reads the DBTextFormatter from stream. Returns self.

    resetBatching:(id <DBTableVectors>) attrs

Same as beginBatching:, but has no effect if batching is already in effect. Returns self.

    setFont:aFont

Sets the current font to the Font object aFont. Returns self.

    write:(NXTypedStream *)stream

Archives the DBTextFormatter to stream.   Returns self.
