setMode:

alphaControlAddedOrRemoved:sender

Does nothing and returns self.

attachColorList:colorList

Does nothing and returns self.

detachColorList:colorList

Does nothing and returns self.

initFromPickerMask:(int)theMask withColorPanel:thePanel

Sets the color picker's color panel to thePanel and returns self. Override this method to respond to
or do other custom initialization. If you override this method in a subclass, you should forward the
part of the implementation.

provideNewButtonImage

Returns the NXImage that represents the NXColorPicker in the NXColorPanel's Matrix of Button
attempts to load the image from a file named MyPickerClass.tiff (where MyPickerClass is the nam
NXColorPicker) in the MyPickerClass bundle of the application's ColorPicker directory. See ªCol
the NXColorPickingDefault protocol specification for a more complete discussion of this bundle.

setMode:(int)mode

Does nothing and returns self. Override this method if your color picker has submodes to set the n
to mode.

updateColorList:colorList

Does nothing and returns self.

viewSizeChanged:sender

Does nothing and returns self.
