

# Using the project find panel;¬Using the project find panel

- 1 Click the Project Find button in Project Builder's main window.
- 2 Enter text to search for in the Find field.
- 3 Choose the type of search from the pop-up list.
- 4 Click the Find button.

The Project Find panel isn't just a find panel—it's an information source. It searches your entire project, including the frameworks. It can tell you what type of symbol (such as class, method, or variable) the string you entered is, how that symbol is defined, where that symbol is used, and if there's documentation. Then, like any good find panel, it takes you right where you want to go.

\_UsingProjectFind.eps ¬

The Project Find panel makes use of the project index. If your project is not indexed, you can only perform textual searches. For more information on the project's index, see Chapter 1.
