FREWARE

=====

Version 37.1

- Now using amiga callback hooks:
New tags for each hook, declared the old tags as obsolete !
The hook structures are allocated and the tags get only the function
as data and not a hook structure !
GUI_HookInterface tag for compilers which don't support register
parameters.
- GEG_Status tag to replace the GA_Disabled tag
- GUI_MsgPort tag to change the message port
- Fixed some problems with disabling/enabling gadgets

Version 37.2

- Removed all the code for the old hooks. Now only works with the amiga
callback hooks ! (Due to this, old programmes have to be changed to
work with GUIEnv from this version on !
- GER_LocaleID tag for localization of requesters

- Requesters can be opened WITHOUT a GUIInfo structure to show any error when opening the GUI
Due to this GUIEnvSupport has no requester support anymore !
- Menu font can be changed (GUI_MenuFont tag)
- Renamed the GUI_GadgetFont tag to GUI_TextFont
This font is used for every gadget (and will be later used for all other visible text objects in newer versions)
- The gadget creation method has changed:
The gadget gets always the font specified with GUI_TextFont, the flags are set to 0 and the user data to NULL ! If you want other values you have to specify them for EACH gadget.
Due to this it is very important to change all programs to follow this new handling ! Otherwise some strange results will occur !
- Font adaptive GUIs with the GUI_TextFont and the GUI_CreationFont tags.
(Not tested yet !)

Version 37.3

-
- The font adaptive code changed the window and gadget sizes totally wrong.
Instead of making the window bigger it made it smaller !
This bug is fixed now.
Font adaptiv code now checks screen size and repositions the window if necessary or even uses a different font to fit onto the screen.
RequesterExample for SAS/C and OberonA

Version 37.4

-
- New font adaptiv code for proportional fonts.
 - Changed all version numbers to the release version (37.4)
 - ReqTools (© Nico François) support
 - GEGen, the GadToolsBox (© Jaba Development) Code Generator for M2Amiga and OberonA. (The GetFileImage BOOPSI class is still missing)
 - New tag GUI_DoBeep to perform a screen display beep
 - New GUI action tags GUI_Lock and GUI_Unlock to lock the GUI and display a wait requester. This works only if the reqtools.library is available!
 - The activation of an button gadget using the key shortcut is now displayed on screen !
