// RESUME.WCM
//*****
// Written by: Paul H. Caron (February 1993) (G9026163@mcmail.cis.McMaster.CA)
// Modified by: Ulrich Brinkmann (March 1993) (uli.brinkmann@nordamerika.fu-
berlin.dbp.de)
// Written for:      WordPerfect for Windows 5.2
// Version:      2.0
//*****
// Notes:      This macro works in conjunction with LOGFILES.WCM by retrieving the
//              names of the files logged by LOGFILES in WPWP.INI, opening the logged
//              files, //              searching for the [Comment][Comment] codes that were
//              inserted at the cursor
//              position by LOGFILES.WCM and deleting them, returning the user to
//              the
//              cursor location prior to the file being closed. The macro will stop as
//              soon as
//              nine documents are currently loaded in WP. No more limitations.
//              //
//*****
