

Sequencing a song is the process in which you decide when to play each pattern. To repeat a pattern, you only have to insert it in the sequence again. You can use the up and down arrows to maneuver through the sequence table. Clicking in the button to the left of any slot will display a menu of possible patterns to be inserted in the slot. Pressing the Return key will display the 'Set Sequence Slot' dialog where you can choose which pattern to insert in the selected slot. Gaps are not allowed (ie: skipping a slot and then inserting a pattern in the next slot).

- To clear a slot you can enter a '0' for the pattern number to insert or you can choose 'Clear' from the Edit menu.
- To play a pattern, double-click on the row that contains the pattern you want played.
