Eudora GURL Handler This applet script fields mailto URLs and then
scripts Eudora to handle them. This gives you simple mailto handling
without having to wait for Eudora 3.0. It is distributed as part of the
Internet Config system and is hence in the Public Domain.
Hint #0 — Set this as your mailto helper in the Internet Config application.
Hint #1 — If it doesn't work, rebuild your desktop.
Hint #2 — It generally works better when Eudora is already running.
Late Night Silly Software
