

SpeedShare is distributed over the Internet as a demo with limited features. For example, the demo version is unlimited in copying files from a server, but can't copy files or folders which total more than 100K to a server.

Full access to all of SpeedShare's features is provided by a serial number. When you register SpeedShare, you receive a unique serial number. Enter your serial number into this demo to enable all of SpeedShare's features. There is no need to wait for software to be shipped, because you are already using it!

SpeedShare is available direct from Qdea for \$49.95 US. Registration requests may be placed by FAX, email, telephone, or regular mail. For more information on how to register SpeedShare, use the Apple menu to choose About SpeedShare and use the popup menu to choose "Registration".
