## Pygmalion

### 1.1 Project: Pygmalion

Project: Pygmalion  
a TaskForce scenario by Jens Granseuer

Difficulty: Medium

The Plot

The Syndicate is up to another threatening research project. This time they have chosen to play God. They are trying to find a way to merge the advantages of the human mind and technology to create some kind of super soldier. Those Cybernatics as the scientists of the Syndicate call them would have the logic capabilities of ordinary humans, but their body would be improved with some toys to increase their strength and stamina as well as to improve their vision, response time, shooting skills...

I suppose you have realized by now that it would be just slightly inconvenient to let them finish their research. We can't take any risk here, so you are going to make your way into their research facility and upload a computer virus to their mainframe which will devastate the system so that they can't reconstruct any of their data.

After you have infected the computer system use the teleporter they have somewhere in there to get out again. That's all.

Oh, I almost forgot, they already might have a prototype of these Cybernatics of theirs in action. If this happens to be true you will of course disassemble that monster before you return, right? Now get lost, I still have work to do...

Captain Tolnow as the highest-ranking member of the squad must survive this operation.
