1.2   Introduction

Introduction

    This is a handy little door with no real use (yet?), all it does is allow
you or a user to explore the Userbase on your BBS either by just listing it,
involking a search or bringing up a statistics screen. Excuse me for ripping
the name of a certain Microshaft product but what I came out with sounded
quite appropriate, so thats why I called it Userbase Explorer (UBE for short).

Features!
~~~~~~~~~
o Looks nice.
o Lots of useful information of users :).
o Search for people in the town of your choice or using the computer of your
  choice and many more seach options.
o Nice statistics screen.
o Quite useless, but a nice addition to any BBS.
o Freeware!

   Anyway, have a cruse of this guide, check out all the relevant sections
and stuff, oh and don't forget to contact me if you decide
to use it, because I like to know these things!

Additional note: This program has been tested and should not damage your
system.

1.4   Installation

Installation

   Simply copy the entire UserbaseExplorer directory to Doors: or unarchive the
UserbaseExplr archive to Doors: and you have it now installed :).

To get it on to the BBS, run it as a standard door, e.g.

 Key: Function: Extra: Lo acc: Hi acc: Filename/Name/Dest/Path:

```
U       34          0          0        10000     Doors:UserbaseExplorer/UBE
```

   Now you have UBE installed, just run the door and play with the menu, it's
pretty straight forward. You can alter the screen that is displayed, the
filename is 'Main.text', there are no other extra files. I would be grateful
if you left the BBS advert in there though, seeing as I wrote it and
everything.

Technical note...

   UBE will load the entire user.data into memory for speed & efficiency, this
means you will need enough free ram to hold the size of your user.data plus
about 90k for the door. If your system runs out of memory, UBE will not even
attempt to run (for safety reasons). This will work on Multinode systems.

1.5 In use

```
              In use

   Once you have
                 installed
                 the door, its time to check it out,
just run it and look at the menu. Try playing with some of the functions, it's
pretty straight forward.
```
