WordMacro.DarkSide1

It's the first peruvian macrovirus I wrote it in Lima in January 08th-13th of 1997 in my university ☺
WM.DarkSide1 spreads when an infected DOC is closed, virus modifies the NORMAL.DOT file, and will spread to other documents equally. If it find the macro "DarkSide1" already on the doc or the template, it assumes the file is already infected.

WM.DarkSide1 contain the following four macros :
- AutoClose
- DarkSide1
- HerramMacro   (macros which are non-visible in the macro list of Winword in Spanish ☺ this macro disable Herramientas/Macro)
- ToolsMacro   (macros which are non-visible in the macro list of Winword in English ☺ this macro disable Tools/Macro)

All macros has been saved with the 'execute-only' feature. You can't view or edit them ☹

When a doc is closed WM.Darkside make a file called darkside.1, if the system is Windoze, in the current directory with the following text in spanish:

ATENCION: esta computadora ha sido infectada!. DarkSide1 sin una computadora es como Billy The Kid sin un revolver ! ! ... Virus DarkSide1 creado en la ciudad de Lima en enero de 1997. -=| DarkSide1 Is a peruvian virus writer[=-
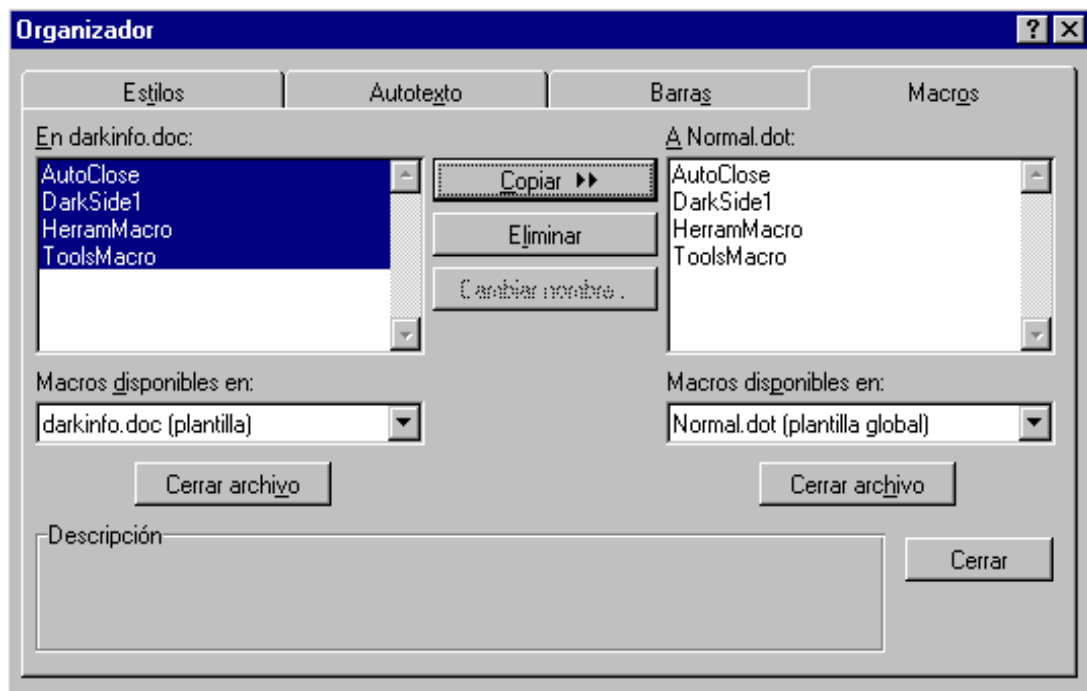

And you listen a Beep.
If you find the code send me an e-mail ☺
Enjoy ! ! !

<div align="center">

DarkSide1
E-Mail :

ds1997@hotmail.com

</div>

To Clean WM.DarkSide1 use the option :
Word in Spanish: Archivo/Plantillas/Organizador/Macros
Word in English: File/Template/Organizator/Macros
and use the option erase (see the imagen)

~~DarkSide1~~ ☺
