

GroupEase UserName Mapper Help

GroupEase UserName Mapper gives users the ability to convert a NetWare username to the Full Name assigned by the NetWare administrator. Additionally, users can display all the user members of the currently defined NetWare groups.

Users

Displaying users full names

Users

Displaying users full names

Select the button pictured above to display the NetWare Full Name associated with all user names. Note that if no Full Name has been defined by the system administrator, the string --None-- will be displayed.

 Groups

Displaying members of a group

Select the button pictured above to display all the members of all currently defined groups.
